soonhokwn@gmail.com

I design and ship the first version of formative technologies — autonomous vehicles, intent-based computing, generative UI, immersive creative tools, display glasses — inventing interaction patterns where none yet exist.

Education

Carnegie Mellon University

Class of 2019

Bachelor of Design
Minor in Physical Computing
Minor in Game Design
Minor in Intelligent Environments
University Honors

Skills

Focus areas

Multimodal and AI interaction
0→1 product design
Spatial computing

Design and prototyping

Figma
Origami Studio
Adobe Creative Suite
SwiftUI
HTML / CSS / JS
Processing / p5.js

AI

Multimodal model behavior
Agentic coding

3D and immersive

Unity
Blender
Three.js / WebGL
ShapesXR / MS Maquette
Cinema4D

Physical

ID sketching
Arduino
3D printing

Experience

Samsung XR | Staff Interaction Designer, Lead

2024 - Present, Mountain View

- Lead system UX for Samsung's glasses portfolio (monocular and non-display), directing a pod of 2–4 designers across HW, ID, and PM partners.
- Partner bidirectionally with the Google XR team on AndroidXR, contributing design system patterns upstream and aligning Samsung's glasses experience with platform decisions on system surfaces, model behavior, and input.
- Define interaction patterns for AI-powered, multimodal input on glasses across voice, gesture, and contextual signals.

Adobe 3D&I | Senior Experience Designer

2020 - 2024, San Francisco

- Shipped four 0→1 authoring and collaborative tools across the Substance 3D suite, owning specific areas across desktop and immersive surfaces.
- Designed novel interaction paradigms for immersive 3D creation in VR, replacing mouse-and-keyboard workflows with headset-based gesture and spatial input.

IDEO CoLab | Fellow

2020

- Designed and prototyped emerging-tech concepts at IDEO's R&D group.

Brain Technologies | Design Prototyper

2019 - 2020, San Mateo

- Led UX direction for a native AI mobile OS shipped to real users, inventing patterns for AI-driven UI generation — interfaces that assemble in real time based on user intent rather than fixed navigation.
- Prototyped novel voice, gesture, and AI-mediated interactions in Origami Studio, Figma, and SwiftUI, translating ambiguous AI capabilities into learnable user experiences.
- Designed feedback loops that routed real user signals back into the product's NLP model, working with engineers to evaluate and steer model behavior.

Cruise Automation | 3D Interaction Designer

2018 - 2019, San Francisco

- Shipped in-vehicle passenger experiences for a leading autonomous driving company, designing 3D interactions that helped riders understand vehicle behavior.
- Built functional prototypes in Three.js, WebGL, and Cinema4D across digital and physical surfaces.
